P2D2 Legged Package Dispensing Robot

(Team 48: Sebastian Missong, Daniel Koltchev, Shihong Yuan,
Liangbing Zhao)

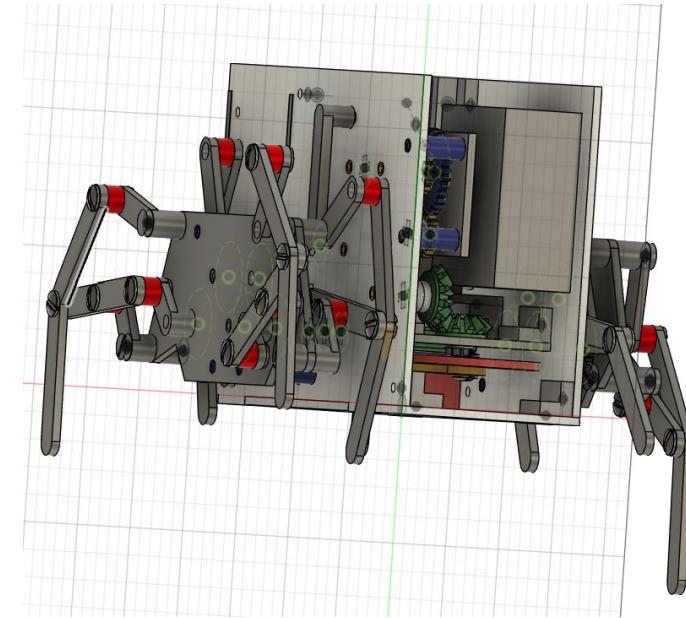

11/13/2025

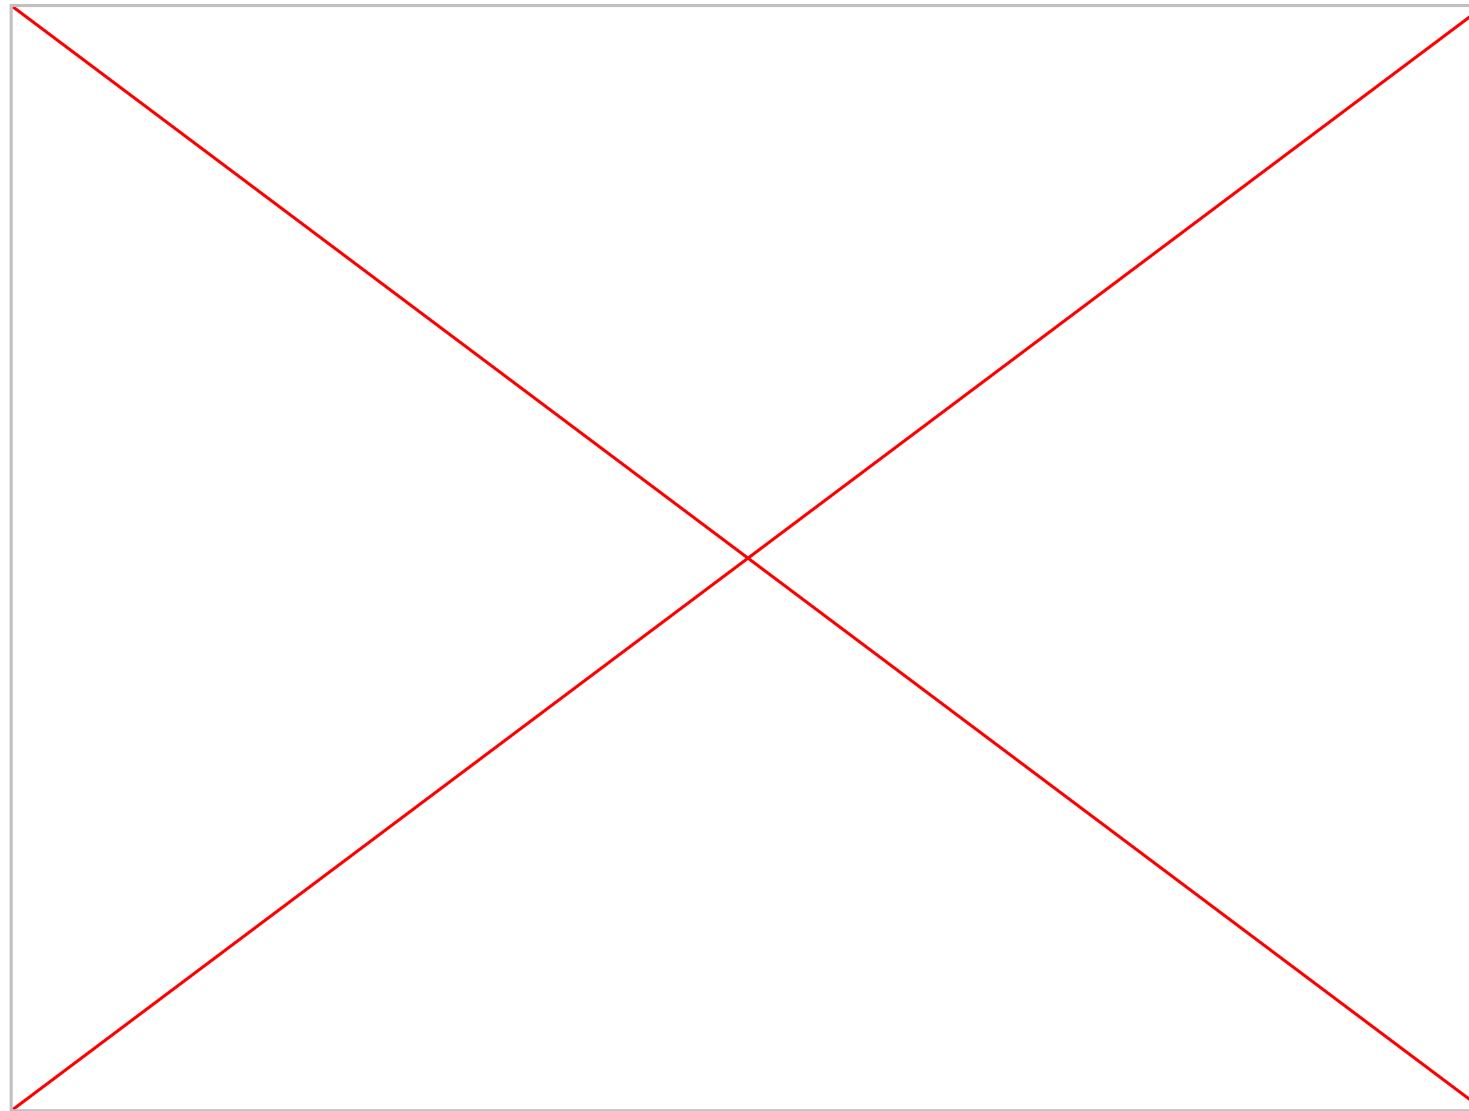

Theme Consideration:

Provide packages delivery services for apartment buildings.

Functional requirements:

- Deliver packages of different sizes
- Easily loaded with large dispensing chute
- Be able to climb over small obstacles
- Tough design resilient to small impacts

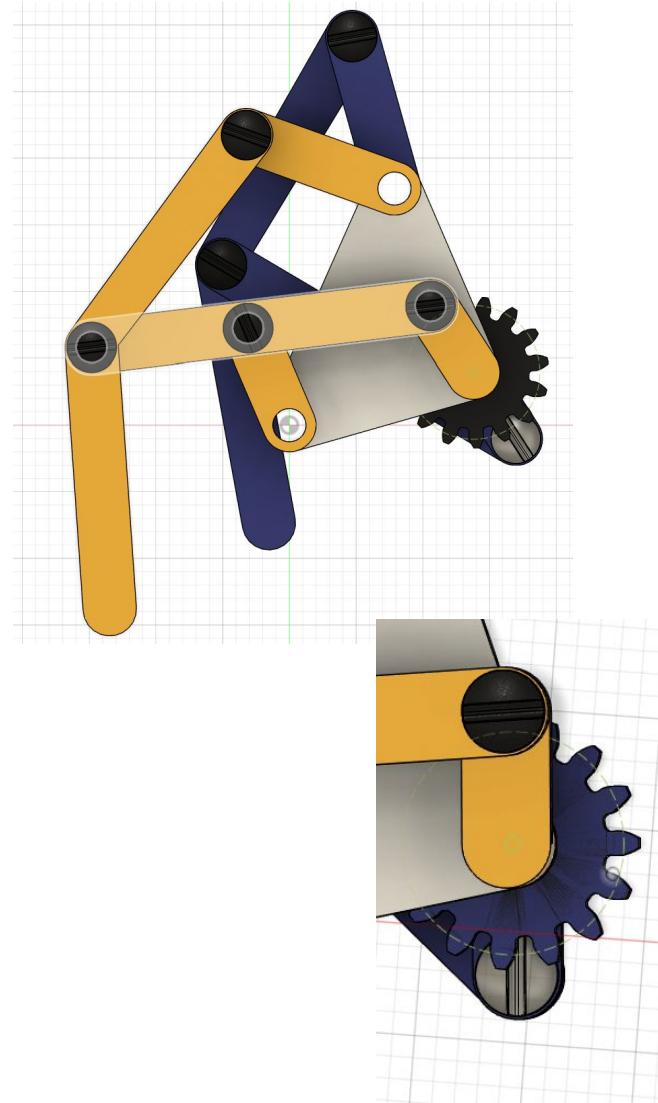

Proposed design — Walking mechanisms

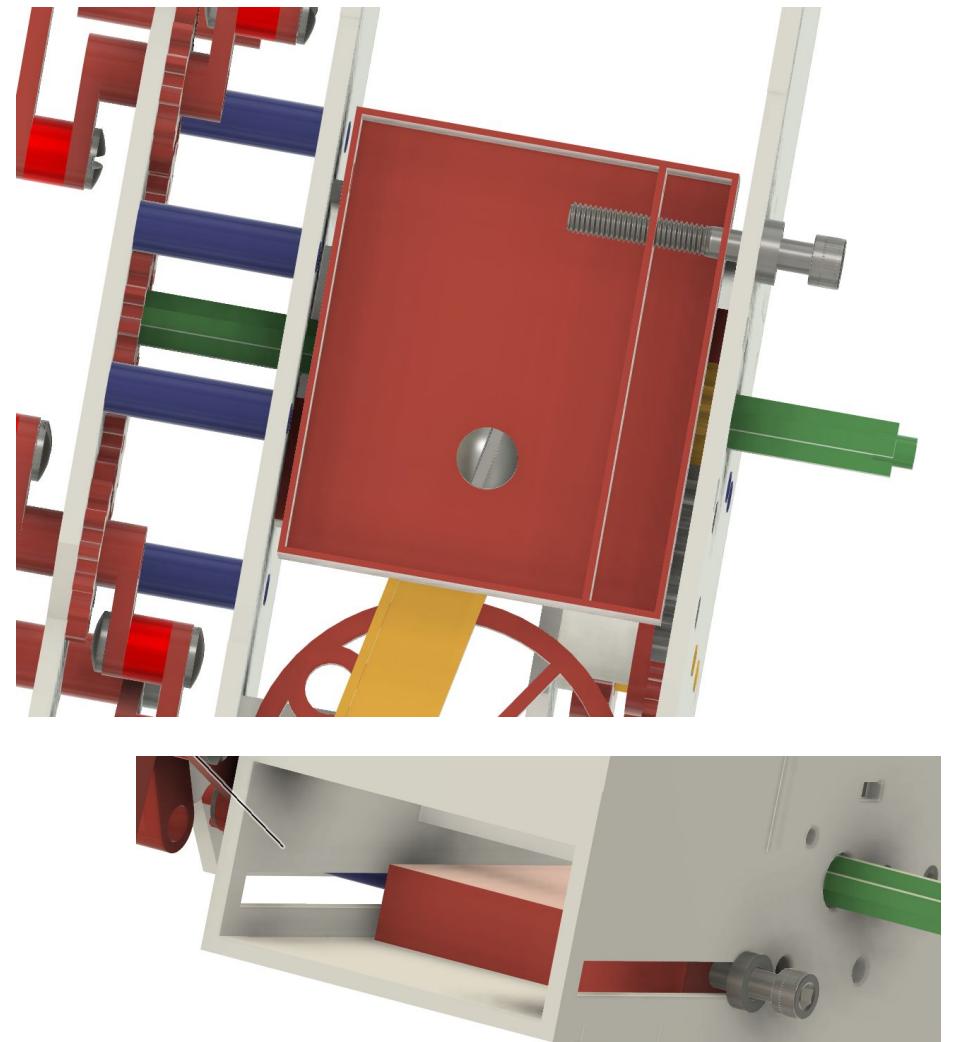

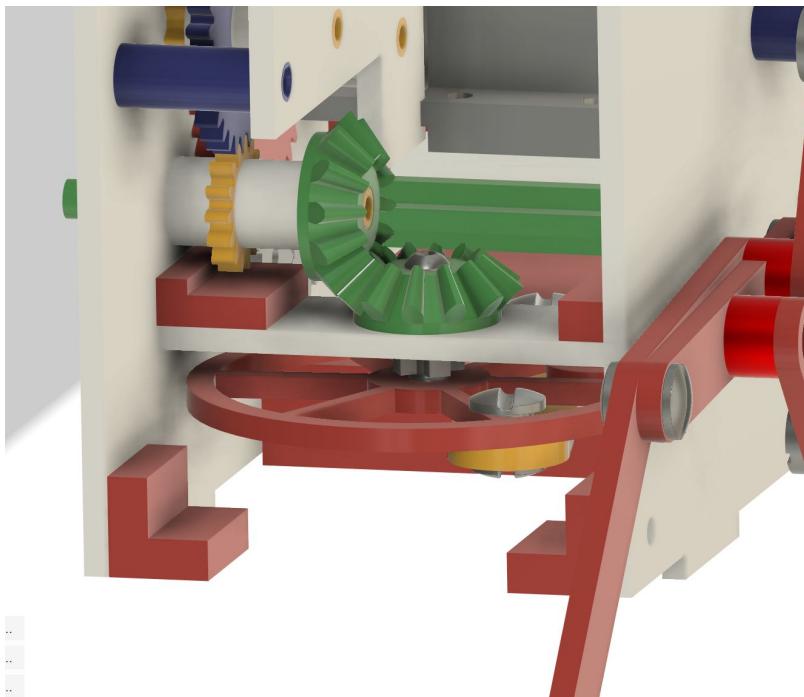

- Eight-leg design
 - 4 sets of two legs at each corner
 - 180 degrees out of phase
- Legs use Klann linkage
 - 6 links
 - 7 full joints
- Four feet on ground at all times to ensure stability

Proposed design — Dispensing mechanisms

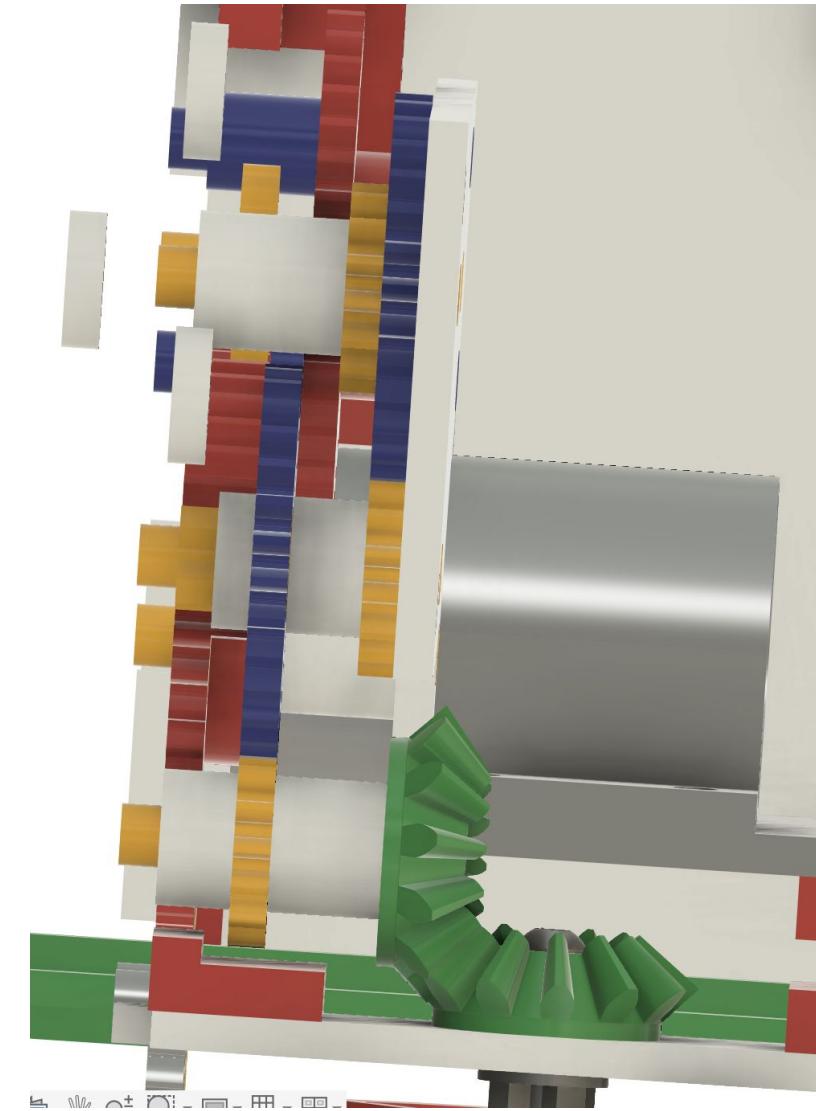

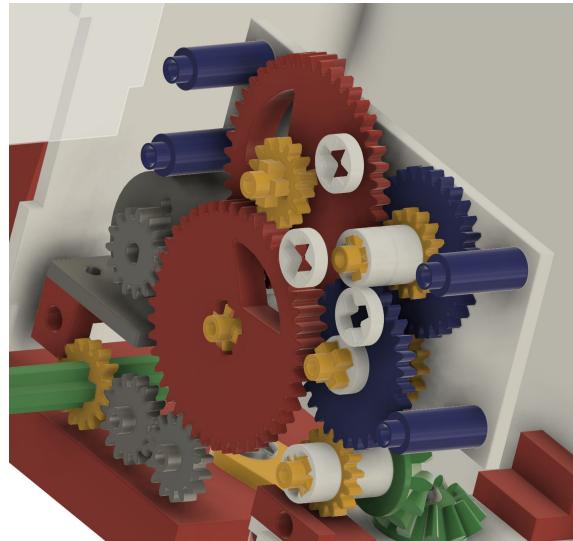

- Crank-Slider mechanism on a partial gear
- The slot prevents the slider from rotating,
- The screw reduces friction and easy to adjust tolerance

Proposed design — Connecting mechanisms

- Partial gears achieve a 40:1 transmission ratio.
- Partial gears and normal gears are stacked to form double-layer gears.
- Bevel gears connect dispensing parts.
- Spacers are used to offset gear positions, saving space.

- Leg movement diagram – contact phase and lift phase
- Duty cycle $\beta = 0.5$, step size 0.1m
- Alternating landings, each set of legs moving forward in a staggered pattern.
